SUMMARY

Software engineer and final-year B.Tech Computer Science student who has designed, built, and deployed three production web applications end to end. Skilled in JavaScript/TypeScript, React, Node.js, PostgreSQL, REST API design, RAG/LLM systems, Docker, and CI/CD. Seeking a software engineering role building scalable, user-facing products.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Tailwind CSS, Bootstrap 5, Responsive Design, Component Architecture, REST API Integration

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, Middleware, Background Jobs, Response Streaming

Databases: PostgreSQL, pgvector, MongoDB, Supabase, Schema Design, Indexing

Cloud & DevOps: AWS (S3), Docker, Kubernetes, CI/CD Pipelines, Git, GitHub, Linux, Postman, Unit Testing, Agile

AI Engineering: Retrieval-Augmented Generation (RAG), Vector Embeddings, Semantic Search, LLM API Integration (Gemini, Groq, Mistral, DeepSeek)

EXPERIENCE

Google Developer Group (GDG) – RIT Islampur Chapter – Islampur, India

Member, Web Development Team | Jan 2025 – Jun 2026

- Developed responsive, cross-browser web applications with HTML5, CSS3, JavaScript, and React.js, translating design requirements into reusable, accessible UI components.
- Integrated RESTful APIs connecting React front ends to Node.js and Express.js services, handling authentication, error states, and asynchronous data loading.
- Reviewed peer pull requests and standardized Git/GitHub branching and deployment workflows, cutting manual release steps and improving code quality across a cross-functional team.

PROJECTS

Lumora – RAG-Based AI Knowledge Platform | React, TypeScript, Node.js, PostgreSQL, pgvector, Gemini, AWS S3, Docker | lumora.omkargavade.xyz

- Architected and deployed an end-to-end Retrieval-Augmented Generation platform that lets users build private knowledge bases and receive context-aware answers with inline source citations.
- Built the document ingestion pipeline – text extraction, chunking, and Gemini embedding generation – and moved it to background processing so large uploads never block the request path.
- Implemented semantic search over PostgreSQL with pgvector, tuning chunk size and retrieval depth to improve answer relevance and reduce hallucinated responses.
- Streamed LLM output token-by-token for near-instant perceived response time, secured the platform with authentication and per-user document isolation, and shipped it to production via Docker.

NexusAI – Multi-Model AI Chat Platform | React, TypeScript, Node.js, MongoDB, JWT, LLM APIs | nexusai.omkargavade.xyz

- Built a production chat platform that queries four LLM providers (Gemini, Groq, Mistral, DeepSeek) concurrently and synthesizes their outputs into a single response.
- Designed an orchestration layer with per-provider failure isolation and automatic fallback, so a single provider outage degrades gracefully instead of failing the entire request.
- Added provider health monitoring and model provenance tracking, giving users traceability of which model produced each answer.
- Secured the API with JWT authentication and wrote automated tests covering orchestration, fallback, and streaming paths to prevent regressions.

Vedanjay Power Pvt. Ltd. – Corporate Website (Client Project) | React.js, JavaScript, Tailwind CSS, HTML5, LLM APIs | vedanjay.omkargavade.xyz

- Delivered and deployed a production corporate website to client business requirements, covering About, Services, Projects, Company Information, and Contact/Enquiry sections.
- Engineered a reusable React component system with responsive layouts validated across desktop, tablet, and mobile breakpoints.
- Integrated an LLM-powered chatbot that answers visitor questions about services and projects, automating routine enquiry handling and improving lead capture.

EDUCATION

Rajarambapu Institute of Technology – Islampur, Maharashtra, India

B.Tech, Computer Science & Information Technology | Aug 2023 – Jun 2027 (Expected) | CGPA: 8.06 / 10

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Web Technologies, Software Engineering, Discrete Mathematics.

CERTIFICATIONS

Full Stack Web Development (MERN Stack) – Apna College, Delta Batch
